Installation

Prerequisites

Side	Required	Notes
.NET	SDK 8+ (built/tested on 10.0.301; retarget `net10.0` → `net8.0` with a 1-line change per csproj)	No workloads
Node	18+	Validated on Node 18 + npm 10
Angular consumer	17 / 18 / 19	Standalone components, no NgModule

.NET — install packages (or project-reference the source)

Core library needs **zero third-party NuGet** (shared framework only):

Package	Contains	Required?
`Pixous.AI.Abstractions`	Interfaces, DTOs, `IConversationStore`	Always (transitively)
`Pixous.AI.Core`	Services, options, selection, in-memory store	Always
`Pixous.AI.Providers`	All built-in providers + retry policy	Always (or subset later)
`Pixous.AI.AspNetCore`	`AddAiSuite`, `/api/ai` endpoints	For API hosts

```
# While evolving: project references (what SampleApi does)
dotnet add &lt;YourApi&gt;.csproj reference &lt;path&gt;/src/Pixous.AI.AspNetCore/Pixous.AI.AspNetCore.csproj

# When stable: pack once, push to your private feed
dotnet pack dotnet/Pixous.AI.slnx -c Release
dotnet nuget push "dotnet/src/*/bin/Release/*.nupkg" --source &lt;your-feed&gt;
```

Verify the build

```
cd dotnet
dotnet build Pixous.AI.slnx
dotnet test Pixous.AI.slnx        # 76 unit + 24 integration (WebApplicationFactory, no keys)
dotnet run --project samples/SampleApi --urls http://localhost:5199
# open http://localhost:5199/demo.html
```

Angular — install the library

Required NPM: `@ngx-translate/core` (runtime UI translation; a dependency of the library). Peers (your app provides): `@angular/common,core,forms` ^17–^19, `rxjs` ^7.8. Streaming uses native `fetch` — no polyfills.

```
npm i @pixous/ai-suite @ngx-translate/core @ngx-translate/http-loader
```

Typecheck the library itself: `cd angular/pixous-ai-suite && npm install && npm run typecheck`.
